

Physical Education

Advanced Subsidiary GCE

Unit **G451**: An Introduction to Physical Education

Mark Scheme for January 2012

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Annotations used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions)

Annotation	Meaning
✓	Correct response
×	Incorrect response
BOD	Benefit of the doubt
REP	Repeat of key point in question or point already awarded
?	Unclear/Unable to read/Decipher
L1	Level 1
L2	Level 2
L3	Level 3
KU	Knowledge and Understanding
EG	Example/Reference
TV	Too Vague
DEV	Development
SEEN	Noted but no credit given
IRRL	Significant amount of material which does not answer the question

Section A Anatomy and Physiology

Question			Answer	Marks	Guidance																						
1	(a)	(i)	<table><tr><td>1. (joint)</td><td>Hinge</td></tr></table>	1. (joint)	Hinge	1																					
1. (joint)	Hinge																										
		(ii)	<table><tr><td>1. (biceps brachii)</td><td>The biceps <u>brachii</u> is the agonist</td></tr><tr><td>2. (biceps brachii)</td><td>The biceps <u>brachii</u> contracts</td></tr><tr><td>3. (triceps brachii)</td><td>The triceps <u>brachii</u> is the antagonist</td></tr><tr><td>4. (triceps brachii)</td><td>The triceps <u>brachii</u> relaxes (to allow the movement)</td></tr><tr><td>5. (antagonistic pair)</td><td>(muscles) work as an antagonistic pair or antagonistic muscle action (only if <u>both</u> biceps brachii <u>and</u> triceps brachii have been named)</td></tr></table>	1. (biceps brachii)	The biceps <u>brachii</u> is the agonist	2. (biceps brachii)	The biceps <u>brachii</u> contracts	3. (triceps brachii)	The triceps <u>brachii</u> is the antagonist	4. (triceps brachii)	The triceps <u>brachii</u> relaxes (to allow the movement)	5. (antagonistic pair)	(muscles) work as an antagonistic pair or antagonistic muscle action (only if <u>both</u> biceps brachii <u>and</u> triceps brachii have been named)	3	<table><tr><th>Accept</th><th>Do not accept</th></tr><tr><td>1. prime mover</td><td></td></tr><tr><td>2. shortens</td><td></td></tr><tr><td>3.</td><td></td></tr><tr><td>4. lengthens / extends = BOD</td><td></td></tr><tr><td>5.</td><td>Agonistic pair</td></tr></table>	Accept	Do not accept	1. prime mover		2. shortens		3.		4. lengthens / extends = BOD		5.	Agonistic pair
1. (biceps brachii)	The biceps <u>brachii</u> is the agonist																										
2. (biceps brachii)	The biceps <u>brachii</u> contracts																										
3. (triceps brachii)	The triceps <u>brachii</u> is the antagonist																										
4. (triceps brachii)	The triceps <u>brachii</u> relaxes (to allow the movement)																										
5. (antagonistic pair)	(muscles) work as an antagonistic pair or antagonistic muscle action (only if <u>both</u> biceps brachii <u>and</u> triceps brachii have been named)																										
Accept	Do not accept																										
1. prime mover																											
2. shortens																											
3.																											
4. lengthens / extends = BOD																											
5.	Agonistic pair																										

Question		Answer	Marks	Guidance		
	(b)	Inspiration (sub max 3 for inspiration)		5	Accept	Do not accept
		1. (muscles contract)	Diaphragm <u>and</u> <u>external</u> intercostal muscles contract		1. diaphragm flattens or lowers	
		2. (rib cage)	Rib cage or ribs move up <u>and</u> out		2.	
		3. (thoracic cavity volume)	Increasing the volume of the thoracic cavity or lungs		3. increasing the size of thoracic cavity or lungs / thorax or chest or chest cavity or rib cage / expands or increased area in lungs = BOD	increasing volume on own
		4. (thoracic cavity pressure)	Decreasing the pressure within the thoracic cavity or in the lungs		4. Thorax or chest or chest cavity or rib cage	Partial pressure or pp
		5. (pressure gradient)	(air) pressure in the lungs is lower than atmospheric pressure		5.	Partial pressure or pp
		6. (movement of air)	Air rushes in		6.	Oxygen/gas
		Expiration (sub max 3 for expiration)			Accept	Do not accept
		7. (passive)	Expiration is <u>passive</u>		7.	
		8. (muscles relax)	Diaphragm <u>and</u> <u>external</u> intercostal muscles relax		8. diaphragm returns to dome shape	
		9. (rib cage)	Rib cage or ribs move down <u>and</u> in		9.	
		10. (thoracic cavity volume)	Decreasing the volume of the thoracic cavity or lungs		10. decreasing the size of thoracic cavity or lungs / thorax or chest or chest cavity or rib cage / decreased area in lungs = BOD	
		11. (pressure)	Increasing the pressure within the thoracic cavity or in the lungs	11. Thorax or chest or chest cavity or rib cage	Partial pressure or pp	
		12. (pressure gradient)	(air) pressure in the lungs is higher than atmospheric pressure	12.	Partial pressure or pp	
		13. (air movt)	Air rushes out	13.	Oxygen / gas	

Question			Answer	Marks	Guidance	
	(c)	(i)		2		
			1. (disease)		Accept	Do not accept
					1.	OA is a (degenerative) bone disease
			2. (articular or hyaline cartilage)		2. worn down / cartilage at the end of (long) bones	Weakens cartilage Cartilage on own Cartilage in joints
			3. (replacement)		3.	
			4. (causes...)		4. reduced RoM stiff=BOD	
			5. (bone spurs)		5.	
			6. (weight bearing joints)		6. Ankles / Wrists / Spine / Shoulder	Joints on own

Question			Answer	Marks	Guidance																																												
		(ii)	<p>Development (sub max 3 for development)</p> <table><tr><td>1. (injury)</td><td>An injury to a joint or joint trauma or damage to growth plate can cause (onset of) OA</td></tr><tr><td>2. (lifestyle)</td><td>Lack of physical activity or increased body weight can cause (onset of) OA</td></tr><tr><td>3. (forces through joints)</td><td>Activity with large forces travelling through the joints or high impact or contact sport can cause OA</td></tr><tr><td>4. (repetitive actions)</td><td>Repetitive actions or skills or overuse can cause OA</td></tr><tr><td>5. (enzymes)</td><td>Exercise causes enzymes to be released which break down cartilage.</td></tr></table> <p>Prevention (sub max 3 for prevention)</p> <table><tr><td>6. (cartilage)</td><td>increase thickness of cartilage</td></tr><tr><td>7. (synovial fluid)</td><td>(thicker cartilage) secretes more synovial fluid that nourishes joint</td></tr><tr><td>8. (joint stability)</td><td>increase joint stability / strengthen ligaments</td></tr><tr><td>9. (muscle strength)</td><td>strengthens (surrounding) muscles or increases muscle tone</td></tr><tr><td>10. (weight management)</td><td>or lower body weight</td></tr></table>	1. (injury)	An injury to a joint or joint trauma or damage to growth plate can cause (onset of) OA	2. (lifestyle)	Lack of physical activity or increased body weight can cause (onset of) OA	3. (forces through joints)	Activity with large forces travelling through the joints or high impact or contact sport can cause OA	4. (repetitive actions)	Repetitive actions or skills or overuse can cause OA	5. (enzymes)	Exercise causes enzymes to be released which break down cartilage.	6. (cartilage)	increase thickness of cartilage	7. (synovial fluid)	(thicker cartilage) secretes more synovial fluid that nourishes joint	8. (joint stability)	increase joint stability / strengthen ligaments	9. (muscle strength)	strengthens (surrounding) muscles or increases muscle tone	10. 1. (movement of gases)	gases move from high partial pressure or concentration to low partial pressure or concentration																											
2. (movement of CO ₂)	CO ₂ diffuses (from the blood) to the alveoli																											
3. (partial pressures)	There is a high partial pressure or ppCO ₂ in the blood / There is a low partial pressure or ppCO ₂ in the alveoli / Partial pressure or ppCO ₂ is higher in the blood (than the alveoli) / Partial pressure or ppCO ₂ is lower in the alveoli (than the blood)																											
4. (diffusion gradient)	There is a diffusion or concentration gradient (between the alveoli and the blood)																											
Accept		Do not accept																										
1. Pressure for partial pressure																												
2.	Pts 2, 3 & 4 Capillaries for blood Lungs or air for alveoli																											
3. Concentration of CO ₂ for ppCO ₂																												
4. Accept pressure gradient																												

Question		Answer	Guidance
	(e)*	Levels Descriptors	Levels Discriminators
		Level 3 (8–10 marks) A comprehensive answer: <ul style="list-style-type: none"> detailed knowledge & understanding effective analysis/critical evaluation and/or discussion/explanation/development clear and consistent practical application of knowledge accurate use of technical and specialist vocabulary high standard of written communication. 	At Level 3 responses <u>are likely</u> to include: <ul style="list-style-type: none"> detailed knowledge and understanding of the effects of a warm up on performance effects of warm up on both skeletal muscle tissue and on the vascular system detailed knowledge and understanding of the effects of a cool down on recovery effects of cool down on both the skeletal muscle tissue and on the vascular system
		Level 2 (5–7 marks) A competent answer: <ul style="list-style-type: none"> satisfactory knowledge & understanding analysis/critical evaluation and/or discussion/explanation/development attempted with some success some success in practical application of knowledge technical and specialist vocabulary used with some accuracy written communication generally fluent with few errors. 	At Level 2 responses <u>are likely</u> to include: <ul style="list-style-type: none"> satisfactory knowledge and understanding of the effects of a warm up on performance effects of warm up on both or either skeletal muscle tissue and on the vascular system satisfactory knowledge and understanding of the effects of a cool down on recovery effects of cool down on both or either skeletal muscle tissue and on the vascular system
		Level 1 (1–4 marks) A limited answer: <ul style="list-style-type: none"> basic knowledge & understanding little or no attempt to analyse/critically evaluate and/or discuss/explain/develop little or no attempt at practical application of knowledge technical and specialist vocabulary used with limited success written communication lacks fluency and there will be errors, some of which may be intrusive. 	At Level 1 responses <u>are likely</u> to include: <ul style="list-style-type: none"> basic knowledge of the effects of a warm up on performance understanding of the effects of a warm up on performance likely to be limited basic knowledge of the effects of a cool down on recovery Understanding of the effects of a cool down on recovery likely to be limited
		[0 marks] No response or no response worthy of credit.	

Question	Answer	Marks	Guidance
	<p>Indicative content: Candidate responses are likely to include: (relevant responses not listed should be acknowledged) Numbered points = knowledge / understanding Bullet points = likely to be development of knowledge</p> <p>Warm up</p> <p>General</p> <ol style="list-style-type: none"> 1. Improves performance / delays OBLA or onset of blood lactate accumulation/performer can work at a higher intensity for longer before fatigue 2. Usually performed in 3 stages: 3. light jog / cardiovascular exercise / sub-maximal exercise <ul style="list-style-type: none"> • to increase heart rate or stroke volume or cardiac output or breathing rate or tidal volume or minute ventilation 4. mobility exercises or (dynamic) stretching <ul style="list-style-type: none"> • increased range of movement (around joint) • increased secretion of synovial fluid or lubrication of joint / better shock absorption 5. sport specific skills or techniques <ul style="list-style-type: none"> • to activate neuromuscular system or muscle memory 6. lasts between 5 and 40 minutes <ul style="list-style-type: none"> • depending on intensity of exercise to follow • <p>other detail:</p> <ul style="list-style-type: none"> • early sweating leads to better temperature regulation during activity • balance of hormones designed to regulate energy production • allows carbohydrates or fatty acids or fats or fuels for exercise to be available earlier • is of significant benefit to asthmatics • less risk of injury to ligaments due to increased elasticity or extensibility <p>Skeletal muscle tissue</p> <ol style="list-style-type: none"> 7. less risk of injury / injury prevention 8. increased (muscle or core body) temperature <ul style="list-style-type: none"> • decreased muscle viscosity / reduction in viscous resistance • increased elasticity or extensibility of muscle fibres (flexibility of muscle fibres/stretched = TV) • increased flexibility / range of movement (around the joint) 9. increased efficiency or economy of muscular contractions or movement 	10	

Question	Answer	Marks	Guidance
	<ul style="list-style-type: none"> • greater speed of conduction of nerve impulses to muscles • greater speed of muscular contraction or relaxation (particularly in fast twitch or FG or FOG or 2a or 2b) • increased motor unit recruitment in muscle cell • greater force of muscular contraction (particularly in fast twitch or FG or FOG or 2a or 2b) • improves performance in power based activities <p>Vascular system</p> <p>10. increased blood flow (due to....)</p> <p>11. ... vascular shunt mechanism</p> <ul style="list-style-type: none"> • vasomotor (control) centre or VCC redistributes blood from organs to the working muscles • vasoconstriction of arterioles or pre-capillary sphincters decrease blood flow to organs • vasodilation of arterioles or pre-capillary sphincters increase blood flow to working muscles <p>12. ... reduced blood viscosity</p> <p>13. ... increased venous return</p> <ul style="list-style-type: none"> • (skeletal) muscle pump squeezes veins forcing blood back towards the heart • (pocket) valves in veins ensure one way blood flow • respiratory pump pulls blood up towards the heart (due to pressure changes in the thoracic cavity from breathing) • venomotor tone or smooth muscle in veins contracts (to increase pressure within the blood vessel) • Starlings' law of the heart / increased venous return increases stroke volume <p>14. (all leads to) increased oxygen delivery to working muscles</p> <p>15. Increased dissociation of oxygen from haemoglobin to muscles or myoglobin (due to...)</p> <ul style="list-style-type: none"> • Increased blood or muscle temperature • Increased blood acidity / decreased blood pH / increased lactic acid in blood / the Bohr shift • Increased ppCO₂ in muscles that gives a steeper diffusion gradient (between muscles and blood or during internal respiration) • Decreased ppO₂ in muscles that gives a steeper diffusion gradient (between muscles and blood or during internal respiration) <p>16. Increased enzyme activity</p> <ul style="list-style-type: none"> • Increased efficiency of energy systems 		

Question	Answer	Marks	Guidance
	<p>Cool down</p> <p>General</p> <p>17. Aids or speeds up recovery process or EPOC / allows performer to train or compete sooner (after previous bout of activity) / repays oxygen deficit or debt</p> <p>18. Usually performed in 2 stages:</p> <p>19. Light jog or similar cardiovascular exercise / active cool down or recovery</p> <ul style="list-style-type: none"> • 5 – 10 minutes / 30 – 40% of VO₂ max / gradually decreasing intensity <p>20. (Static) stretching</p> <ul style="list-style-type: none"> • short static stretches of 6-10 seconds each • realigns muscle fibres / relaxes muscle / returns muscle to resting length <p>21. Cold water therapy or ice baths or contrast water therapy</p> <ul style="list-style-type: none"> • improves removal of lactic acid after therapy completed • improves recovery of nervous system / stimulates the central nervous system • reduces swelling / minimises effects of DOMS or delayed onset of muscle soreness / improves recovery from micro-tear damage of muscle fibres • can have a negative effect ... <p>Other detail</p> <ul style="list-style-type: none"> • compression wear (e.g. compression socks, tights, clothes) have been found to decrease muscle soreness or swelling or lactate levels or increase blood flow and venous return • massage or sleep or nutrition can speed up recovery process <p>Both</p> <p>22. Increased speed of removal of lactic acid or CO₂ or waste products (from blood or muscles)</p> <ul style="list-style-type: none"> • keeps capillaries dilated • flushes oxygenated blood through the muscles <p>Skeletal muscle tissue</p> <p>23. Decreased risk of Delayed Onset of Muscle Soreness or DOMS</p> <ul style="list-style-type: none"> • (which is) intracellular pressure or swelling causes pain • experienced 24-72 hours after exercise • due to microscopic tears in the muscle fibres 		

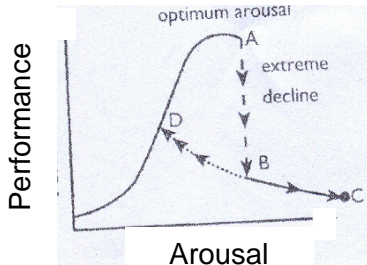

Question			Answer	Marks	Guidance
			Vascular system 24. Keeps metabolic activity elevated / gradually decreases metabolic activity <ul style="list-style-type: none"> • heart rate or respiratory rate or stroke volume gradually decrease or remain elevated • increased enzyme activity involved in buffering or breakdown of lactic acid / increased enzyme activity for efficient breakdown of glycogen in aerobic system or glycolysis 25. Maintains blood flow or stroke volume or cardiac output or blood pressure or venous return <ul style="list-style-type: none"> • (skeletal) muscle pump or respiratory pump remain active • (which) prevents blood pooling • vascular shunt mechanism remains active 		

Section B Acquiring Movement Skills

Question		Answer	Marks	Guidance	
2	(a)		4	One mark for description via practical example One mark for explanation	
		Open		Accept	Do not accept
		1. (Open eg)		1. Must be a situation that has <u>significant</u> environmental influences /sailing = BOD netball / football <u>game</u> = BOD	The name of a sport eg football
		2. (Open explanation)		2. Depending on or relies on environment = BOD Conditions for environment Many factors to consider = BOD Affected by external factors=BOD	Crowd/playing surface Stimuli affect the skill =TV
		Closed		1 mark for description via practical example 1 mark for explanation	
		3. (Closed eg)		Accept	Do not accept
		4. (Closed explanation)		3. Must be a situation that has few significant environmental influences	The name of a sport eg golf
				4.	No stimuli affect the skill = TV

Question			Answer	Marks	Guidance	
2	(b)	(i)	Descriptions	3	Accept	Do not accept
			1. (FB)		1.	'Involves (internal) feedback' on own / 'Feedback during performance' on own
			2. (memory and perceptual trace)		2.	There is a memory trace on own / There is a perceptual trace on own
			3. (comparison)		3. Compares current action with one already learned (and stored in LTM)	
			4. (correction/ learning)		4. motor programmes are formed or updated	
			5. (reinforce-ment)		5.	
			6. (level 2)		6.	Level 2 on own
			7. (level 3)		7.	Level 3 on own
				1		

Question			Answer	Marks	Guidance	
2	(b)	(ii)	Practical example: mark first attempt <div>1. Gymnast on beam or skier or trampolinist etc making adjustments or to keep balance / high diver making adjustments</div>	1		
					Accept	Do not accept
					1. Any description where the performer acts on feedback during performance	A practical example when there is little or no time for feedback eg a 'reflex' save in hockey

Question		Answer	Marks	Guidance																																
2	(c)	<p>Graph</p>  <p>6 marks from 6:</p> <table><tr><td>1.</td><td>If arousal increases so does performance up to a certain (optimal) level.../ If graph:... arousal and performance axes labelled correctly and curve drawn to A and optimum level identified</td></tr><tr><td>2.</td><td>... if arousal or (cognitive) anxiety or stress or worry or apprehension continues to increase or is (too) high...</td></tr><tr><td>3.</td><td>...there is a sudden or extreme or acute decrease in performance or learning / If graph:...line A-B drawn with arrow/s and labelled 'extreme decline' and explanation /annotation re decrease in performance</td></tr><tr><td>4.</td><td>Cognitive anxiety or stress or apprehension or worry interacts with somatic anxiety or stress on body systems / high cognitive arousal coincides with high somatic anxiety</td></tr><tr><td>5.</td><td>...and body control or coordination are lost</td></tr><tr><td>6.</td><td>This has effect of: not being able to concentrate / losing cognitive control / getting distracted / losing perceptual awareness / difficulty making decisions</td></tr><tr><td>7.</td><td>If arousal or (cognitive) anxiety lowered or emotions controlled, performance can improve again or upward curve can be rejoined / If graph: line B-D drawn with arrow/s and explanation /annotation re control of anxiety</td></tr></table>	1. Question		Answer	Guidance
2	(e)*	Levels Descriptors Level 3 (8–10 marks) A comprehensive answer: <ul style="list-style-type: none"> detailed knowledge & understanding effective analysis/critical evaluation and/or discussion/explanation/development clear and consistent practical application of knowledge accurate use of technical and specialist vocabulary high standard of written communication. 	Levels Discriminators At Level 3 responses <u>are likely</u> to include: <ul style="list-style-type: none"> detailed understanding of at least two types of reinforcement discussion and reference to both movement skills and healthy lifestyle behaviour understanding of S-R bond; reference to learning or conditioning by linking or associating stimulus and response
		Level 2 (5–7 marks) A competent answer: <ul style="list-style-type: none"> satisfactory knowledge & understanding analysis/critical evaluation and/or discussion/explanation/development attempted with some success some success in practical application of knowledge technical and specialist vocabulary used with some accuracy written communication generally fluent with few errors. 	At Level 2 responses <u>are likely</u> to include: <ul style="list-style-type: none"> satisfactory understanding of at least one type of reinforcement discussion and reference to both movement skills and/or healthy lifestyle behaviour satisfactory knowledge of S-R bond
		Level 1 (0–4 marks) A limited answer: <ul style="list-style-type: none"> basic knowledge & understanding little or no attempt to analyse/critically evaluate and/or discuss/explain/develop little or no attempt at practical application of knowledge technical and specialist vocabulary used with limited success written communication lacks fluency and there will be errors, some of which may be intrusive. 	At Level 1 responses <u>are likely</u> to include: <ul style="list-style-type: none"> basic understanding of at least one type of reinforcement reference to both movement skills and/or healthy lifestyle behaviour little if any reference to S-R bond
		[0 marks] No response or no response worthy of credit.	

Question		Answer	Marks	Guidance
2	(e)	<p>Indicative content: Candidate responses are likely to include: (relevant responses not listed should be acknowledged)</p> <p>Numbered points = knowledge / understanding</p> <p>Bullet points = likely to be development of knowledge</p> <p>General</p> <ol style="list-style-type: none"> 1. Reinforcement (is a process that) ensures that the correct or desired response is repeated / reinforcement increases the probability of (desired) response or behaviour occurring again <ul style="list-style-type: none"> • it strengthens the S-R bond eg from coach or teacher or parent or teammate Positive 2. Positive reinforcement <ul style="list-style-type: none"> • Give a stimulus or satisfier ... eg praise or rewards or positive feedback or encouragement • ...after a successful or desired response • ... to strengthen the S-R bond / ...to ensure repetition of (desired) behaviour... • it raises confidence or self esteem or makes you feel good about yourself • it motivates or encourages • good for cognitive learners or beginners or children / give soon after the desired response 3. Give rewards <ul style="list-style-type: none"> • ...that are tangible eg reaching target weight may attract money reward / badge / certificate other suitable example of a tangible reward •or intangible eg applause or praise (credit when given as example of an intangible reward) 4. Show results or benefits of following a healthy lifestyle eg feel better / more energy / make more friends 5. Educate or persuade by showing benefits or positive outcomes eg feel better / more energy / make more friends <ul style="list-style-type: none"> • using role models to..... • train with set goals, and then give results of goals being reached eg in exercise adherence 6. Links with or supports (Thorndike's) Law of Effect <ul style="list-style-type: none"> • it strengthens the S-R bond between exercise and being healthy 	10	

Question	Answer	Marks	Guidance
	<ul style="list-style-type: none"> • associate good outcomes with desired behaviour eg if you serve correctly in tennis and it wins a point, you are more likely to serve in that way again <p>7. Enjoyment of the activity increases the chance that the person will do the activity again eg enjoyable activities or variety in diet</p> <p>8. BUT – don't give too much praise/ or reward or it can lose its effect / care should be taken that the wrong behaviour isn't inadvertently encouraged</p> <p>Negative</p> <p>9. Negative reinforcement</p> <ul style="list-style-type: none"> • aims to weaken undesired S-R bond • (and) aims to strengthen the correct or desired S-R bond •(in order to) condition the (desired) behaviour or response • can be useful for autonomous learners or advanced performers • can motivate or encourage <p>10. Give disapproval or an annoyer or a negative or unpleasant or noxious stimulus or negative feedback</p> <ul style="list-style-type: none"> • When skill or behaviour undesired or wrong eg criticism <p>11.(then) remove or withdraw it when the correct or (desired) response occurs / stop negative feedback or punishment / withdrawal of punishment eg 'telling off' stopped if active or healthy behaviour or lifestyle shown / parent stops criticising child for not doing any physical activity</p> <p>12. Take away praise or reward eg remove privileges if inactive or unhealthy behaviours are shown</p> <p>13. BUT – not good for cognitive learners / can sap confidence or motivation / participants may not understand why stimulus or praise has been withdrawn (so they do not link it to following BAML)</p> <p>Punishment</p> <p>14. Punishment</p> <ul style="list-style-type: none"> • used to eliminate undesired behaviour <p>15. give an unpleasant or noxious stimulus or negative feedback</p> <ul style="list-style-type: none"> • ...to (help to) break or weaken an (undesired) S-R bond or to stop an (undesired) behaviour or response. • can stop us learning incorrect movements or unhealthy behaviour eg tell them off or embarrass them or make them feel uncomfortable if not active, or if healthy 		<p>Look for key points of:</p> <ul style="list-style-type: none"> • annoyer • being withdrawn

Question			Answer	Marks	Guidance
			<p>behaviour or lifestyle not shown eg send them off / award penalty again them / fine or ban them</p> <p>16. Breaks or helps to break or block an (undesired) S-R bond</p> <p>17. Compare them with others who are unhealthy / dysfunctional eg accept any suitable example of comparisons or 'showing them up'</p> <p>18. BUT - can lead to frustration or anger or resentment BUT - can stop someone starting or continuing a healthy lifestyle</p> <p>Other types of reinforcement</p> <p>19. Complete or continuous reinforcement</p> <ul style="list-style-type: none"> • Rewards given after each successful response <p>20. Partial reinforcement</p> <ul style="list-style-type: none"> • Reward given after a number of successful responses <p>Factors to consider</p> <p>21. What type of reinforcement to use / when to use the different types / when/how soon after response to give / ratio of positive to negative / the phase of learning of the performer (cognitive, associative, autonomous)</p>
